

## Practical Aviation Physiology for Pilots

This presentation will give you the ability to preflight yourself as well as you preflight your aircraft. It is designed to communicate, in non-medical terms, the essential facts a pilot should know about his or her physiological condition. Are you medically fit to fly? The presentation will cover the medical certification process, preparing for the medical exam, threats to good pilot performance, vision issues, spatial disorientation, action that pilots can take before and during the flight to achieve peak performance and recommended resources for further study.

**Directions:** Lagoon Drive to Iako Place, First building on the left, within the fenced area. FAAST presentations are held in one of the upstairs classrooms.

### A message from the National FAASTeam Manager

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?  
Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!
